Q1. Banking Transaction System – Exception Handling

CODE

```
import java.util.*;
class InsufficientBalanceException extends Exception{}
class Main{
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        try{
            int balance=sc.nextInt(),amount=sc.nextInt();
            if(amount<=0){
                System.out.println("Transaction failed:Invalid input");
                return;
            }
            if(amount>balance) throw new InsufficientBalanceException();
            System.out.println("Withdrawal successful\nRemaining balance =" +(balance-amount));
        }catch(InputMismatchException e){
            System.out.println("Transaction failed:Invalid input");
        }catch(InsufficientBalanceException e){
            System.out.println("Insufficient balance");
        }finally{
            System.out.println("Transaction completed");
        }
    }
}
```

INPUT
10000 3000
10000 12000
10000 -500

OUTPUT
Error: Main method not found in class InsufficientBalanceException, please define the main method as:
public static void main(String[] args)
or a JavaFX application class must extend javafx.application.Application

Q2. Hospital Patient Registration – User-Defined Exception

CODE

```
import java.util.Scanner;

class InvalidAgeException extends Exception{
    public InvalidAgeException(String msg){
        super(msg);
    }
}

class InvalidTemperatureException extends Exception{
    public InvalidTemperatureException(String msg){
        super(msg);
    }
}

public class PatientRegistration{
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        sc.useDelimiter(",|\\s+");
        if(!sc.hasNext())
            return;
        try{
            String name=sc.next().trim();
            int age=sc.nextInt();
            double temp=sc.nextDouble();
            if(age<18){
                throw new InvalidAgeException("InvalidAgeException:Age must be 18 or above");
            }
            if(temp<95.0||temp>104.0){
                throw new InvalidTemperatureException("InvalidTemperatureException:high fever or abnormal temperature");
            }
            System.out.println("patient registered successfully: "+name);
        }catch(InvalidAgeException|InvalidTemperatureException e){
            System.out.println(e.getMessage());
        }catch(Exception e){
            System.out.println("Invalid input format");
        }finally{
            System.out.println("Registration process completed,");
        }
    }
}
```

OUTPUT

```
Compilation Error:
